

Dear Melotech Team,

I'm reaching out because I believe I can help Melotech build the fast, scalable and AI-driven systems needed to push the future of media and entertainment. My work at Winnov8 and Revela has centered on shipping full-stack features at high speed using Node.js, Next.js and PostgreSQL, while collaborating directly with product and commercial teams to turn ideas into production-ready experiences.

I combine strong engineering fundamentals with an AI-first workflow. I use AI coding assistants, design tools and development agents to accelerate architecture decisions, implementation, testing and documentation. This allows me to deliver clean, reliable and well documented code and ship meaningful features on a short cycle. I have experience designing user flows, building robust APIs, integrating services, and deploying to AWS in environments where simplicity and scale must coexist.

As someone currently pursuing a CS degree and already contributing to real products, I thrive in fast-moving teams where ownership is expected and impact is immediate. Melotech's ambition, pace and love for creative technology match how I work and what I want to build. I'm confident that I can help you ship faster, improve engineering velocity and create the AI-powered foundations that support your product as it scales.

I would love the opportunity to contribute to your mission and help shape the technology behind the next generation of media experiences.

Cheers,  
Olaniyi George
