Dear Chowdeck Hiring Team,

I'm applying to join the Early Careers Talent Pool. I'm a full-stack engineer based in Lagos, currently finishing my B.Sc. in Computer Science at the National Open University of Nigeria (expected December 2026) while working as a backend-leaning full-stack developer.

Over the past few years I've shipped production features across Node.js, Python, and TypeScript; a ~58% throughput improvement on a live notification system at Winnov8, a 91%+ latency reduction on a high-traffic API at The ECO Platform, and end-to-end payment and authentication flows at Revela Africa. Outside of work, I'm building two AI-systems products from architecture through implementation: a real-time WebRTC voice platform (Truefit.ai) and a cooperative-savings backend (CoopWise), which won the Accrue x NexaScaleHQ Hackathon.

What draws me to Chowdeck specifically is the operational complexity underneath the product; coordinating real-time state across customer, vendor, and rider apps at scale is exactly the kind of distributed, high-integrity systems work I want to keep growing in. I'd welcome the chance to bring that experience to your engineering team as opportunities open up, and to keep learning from the team you've built.

Thank you for your time and consideration.

Best regards,

Olaniyi George
