MEET ME

I'm a software developer with a strong focus on backend systems. I enjoy designing and building scalable, reliable software that solves real problems. I'm experienced in writing clean, tested, and maintainable code with attention to performance, security, and long-term scalability. I care about building systems that are both efficient and easy to maintain.

SKILLS

Backend Stack: Python, FastAPI, Django, TypeScript, Node.js, Next.js

Frontend Stack: Next.js, Remix.js, React, Tailwind, Zustand

Databases: PostgreSQL, MongoDB, SQLite3

DevOps & Cloud: AWS (EC2, S3, RDS, SES), Docker, Render, Vercel

Others: OAuth, Postman, GitHub, Browser Performance Optimization

EXPERIENCE

[Revela Africa](#) - *Fullstack Developer*

2025 | Tech Stack: Next JS, TypeScript, Fast API, Redis, Postgres

- Built and refined core event-management features including event creation, ticketing flows, dynamic RSVP, secure payments, and user authentication, ensuring a seamless end-to-end experience.
- Integrated critical external services such as Google APIs and payment gateways, enabling automated onboarding, calendar syncing, and smooth checkout across devices.
- Improved system performance during peak event hours by optimizing service orchestration and leveraging Redis caching, reducing response times and stabilizing high-traffic operations.

[Winnov8](#) - *Backend Developer*

2025 | Tech Stack: React, TypeScript, Node.js, Redux, MongoDB, Redis, Tailwind CSS

- Designed and implemented features across the frontend and backend, including an AI recommendation system and key API integrations.
- Collaborated on architectural decisions to ensure scalability and high availability of deployed features.

Impact: Contributed to improving a real-time communication system's performance by 40% through optimized caching strategies.

[ECO](#) - *Backend Developer*

2025 | Tech Stack: Python, Django, Redis, PostgreSQL, OpenAI API

- Improved overall API performance by cleaning the codebase of dead code and rewriting inefficient code.
- Integrated Redis caching for improved API responsiveness.

Impact: Improved system throughput and reduced API latency by over 91.4%, supporting thousands of concurrent users.

[WispTalkAfrica](#) — *Full-stack Software Developer*

2023 – 2024 | Tech Stack: Django, Django REST Framework, AWS (S3, RDS), Next.js, Zustand, Redux

- Developed and deployed a scalable REST API supporting all major organizational products.
- Upgraded systems to cloud services (AWS S3 & RDS) to ensure 99.9% uptime for production systems.

Impact: Led a team of developers to build, scale, and continuously improve applications serving thousands of active users across multiple products.

PROJECTS

[CoopWise](#) (Fullstack)

AI-powered savings platform for managing trusted savings groups with automation and smart financial tips.

Stack: FastAPI, PostgreSQL, Gemini 1.5 Flash, Redis, Next.js, Zustand

- Built scalable REST APIs, role-based auth, real-time communication and notification, and implemented various payment gateways.
- Designed and optimized PostgreSQL schemas for transaction integrity and real-time dashboards.

Focus: Financial systems, AI financial assistant, API design, authentication, distributed tasks, concurrency, real-time notifications.

[TrueFit](#) (Full-stack | 2024)

AI-driven platform for hiring metrics and personalized interview guidance.

Stack: Next.js, MongoDB, TypeScript, OpenAI API

- Developed secure APIs, integrated AI-powered feedback, and structured NoSQL interview data models.

Focus: AI integration, API security, personalized recommendations.

[LockedIn](#) (Fullstack)

Fullstack habit-tracking app to help users stay consistent and achieve goals with real-time progress tracking and feedback.

Stack: Next.js, MongoDB, TypeScript, Zustand

- Designed backend for habit creation and tracking, implemented real-time progress visualization, and secured user data with robust auth flows.

Focus: Full-stack architecture, state management, NoSQL modeling, real-time UX.

EDUCATION

Professional Development – Backend Development (Mar 2025 – Oct 2025)

[ALX Africa](#) | (March 2025 – October 2025) (In Progress)

Bachelor Of (B.Sc) – Computer Science (2022 – 2025)

National Open University of Nigeria, Lagos State
