

ABELEJE OLANIYI GEORGE

Full-Stack Engineer · AI Systems & LLM Playforms

olaniyigeorge77@gmail.com · github.com/olaniyigeorge · olaniyigeorge.vercel.app

SUMMARY

Full-stack engineer with 5 years of production experience building scalable APIs, LLM-powered platforms, and real-time systems using Python, Node.js, TypeScript, React, and Next.js. I build end-to-end, from system architecture to the frontend your customers interact with daily.

I thrive at the intersection of engineering and customer outcomes: translating real user pain into reliable, shippable product. My recent work spans AI agent architectures, real-time voice systems, and distributed backends, all built to perform under production conditions, not just in demos.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript Backend: FastAPI, Django (DRF), Node.js/Express, RESTful API Design, Webhooks

Frontend: React, Next.js, Tailwind CSS

AI/LLM: Gemini Live API, LLM tool-calling, agent state machines, RAG pipelines, prompt engineering

Databases: PostgreSQL, MongoDB, Redis, SQLite

Cloud & DevOps: AWS (EC2, S3, RDS, SES), Docker, CI/CD pipelines, Render, Vercel

Other: System design, WebRTC, distributed systems, performance optimization, load testing

PROFESSIONAL EXPERIENCE

Full-Stack Developer · **Winnov8**

2025 – Present

- Owned end-to-end development of production features across frontend and backend, shipping scalable user-facing functionality from design to deployment.
- Collaborated directly with stakeholders to scope, design, and deliver an intelligent recommendation system – iterating based on real usage feedback until it met actual product needs.
- Optimized a real-time notification and messaging system, increasing throughput by ~58% under live usage conditions.
- Contributed to architecture decisions, code reviews, and performance tuning as the platform scaled.

Full-Stack Developer · **Revela Africa**

2025

- Built core event-management features end-to-end: creation flows, ticketing, dynamic RSVP, secure payments, and authentication — delivering a seamless customer experience across devices.
- Integrated Google APIs and payment gateways with webhooks, enabling automated onboarding, calendar syncing, and smooth checkout.
- Optimized service orchestration with Redis caching, significantly reducing response times during peak traffic.

Backend Engineer · **The ECO Platform**

2024

- Audited and refactored the Django codebase — eliminated dead code, rewrote inefficient ORM query paths, and improved overall API quality.
- Reduced API latency by over 91% and increased system throughput to support thousands of concurrent users through systematic query optimisation and caching.

Full-Stack Software Engineer · **WispTalk Africa**

2023 – 2024

- Led cloud migration to AWS (S3, RDS, EC2, CloudFront), significantly improving uptime and system resilience.
- Strengthened infrastructure with monitoring practices and incremental performance improvements across production workloads.

Freelance Software Developer · **Independent**

2020 – 2022

- Built data scraping, automation, and web systems for clients across industries – independently managed scoping, development, and delivery.
- Entry point into backend engineering, API development, and algorithmic data processing pipelines.

PROJECTS

Truefit.ai – Real-time AI voice interview platform

Stack: Python, FastAPI, WebRTC (aiortc), Gemini Live API, PostgreSQL, Redis, Next.js, TypeScript

- Architected a dual-channel real-time system: WebSocket for session signalling and WebRTC (SRTP/UDP) for media — deliberately chosen over naive WebSocket streaming to eliminate head-of-line blocking and ensure jitter-resilient audio delivery.
- Structured Gemini as a tool-calling interview state machine with domain-driven architecture and abstract ports, giving the agent zero dependency on current infrastructure — clean algorithmic decision logic surfaced through a Next.js UI.

- Diagnosed and fixed a compound audio pipeline bug (greedy queue drain collapsing 40 chunks + pts clock reset corrupting frame pacing), resolving an infinite greeting loop that made the system unshippable.

CoopWise – AI-powered group savings & cooperative management platform

Stack: FastAPI, PostgreSQL, Redis, Next.js, Zustand, Gemini 1.5 Flash, Smart Contracts (Flow)

- Architected scalable FastAPI backend handling authentication, contribution cycles, payouts, and real-time financial state management with Redis-backed caching.
- Implemented algorithmic scoring and AI agents with RAG pipelines to surface personalised financial insights — decision logic built end-to-end from data model to React UI.
- Earned hackathon recognition for system design, scalability, and real-world impact.

EDUCATION

B.Sc. Computer Science · National Open University of Nigeria (*Final year, 2026*)

Professional Development, Backend Engineering · ALX Africa (*Mar 2025 – Oct 2025*)
