

ABELEJE OLANIYI GEORGE

Senior Backend Engineer

olaniyigeorge77@gmail.com · github.com/olaniyigeorge · linkedin.com/in/abeleje-olaniyi · olaniyigeorge.vercel.app

SUMMARY

A backend engineer with 5 years of production experience building robust backend systems, API infrastructure, real-time systems, and high-throughput services in Node.js, Python, and TypeScript. I have a track record of measurable performance wins; 58% throughput gains on a live messaging system, 91% latency reduction on a high-traffic API and of owning services end-to-end across authentication, payments, and async processing. Comfortable operating across multiple client surfaces (web, mobile-facing APIs) the way Chowdeck's customer, vendor, and rider apps require.

TECHNICAL SKILLS

Languages: TypeScript/JavaScript, Node.js, Python

Backend: Express-style REST API design, FastAPI, Django, Webhooks, async processing

Data & Cache: PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: AWS (EC2, S3, RDS, SES), Google Cloud, Docker, CI/CD pipelines

Practices: System design, high-scale API architecture, load testing, performance optimization, code review

WORK EXPERIENCE

Winnov8

Full-Stack Developer

2025 – Present

- Owned end-to-end feature development across frontend and backend, shipping production features from design to deployment.
- Worked with stakeholders to design and iterate an intelligent recommendation system based on real user feedback.
- Optimized real-time notification and messaging system, improving throughput by ~58%.
- Contributed to system architecture, code reviews, and performance tuning during platform scaling.

Revela Africa

Full-Stack Developer

2025

- Built core event-management features end-to-end, including ticketing, RSVP flows, payments, and authentication across devices.

- Integrated Google APIs and payment gateways using webhooks for onboarding, calendar sync, and checkout automation.
- Optimized backend orchestration with Redis caching, significantly reducing response times under peak traffic.

The ECO Platform

Backend Engineer

2024

- Audited and refactored Django codebase, removing dead code and improving ORM query efficiency and API structure.
- Reduced API latency by 91%+ and improved throughput through query optimization and strategic caching.
- Delivered a fully optimized, well-documented codebase to the engineering team, enabling a smooth handoff for ongoing development and long-term maintenance.

WispTalk Africa

Full-Stack Software Engineer

2023 – 2024

- Led AWS cloud migration (S3, RDS, EC2, CloudFront), improving uptime, scalability, and system resilience.
- Implemented monitoring practices and incremental performance improvements across production workloads.
- Defined the platform's data-sharing framework with ISPs and partners while maintaining SLA.

Independent

Freelance Software Developer

2020 – 2022

- Built automation, scraping, and web systems for clients across industries, managing end-to-end delivery.
- Developed a strong backend foundation through API design, data pipelines, and algorithmic processing systems.

PROJECTS

Real-time AI voice interview platform

Python, FastAPI, GCP, WebRTC (aiortc), Gemini Live API, PostgreSQL, Redis

- Built a dual-channel real-time architecture (WebSocket signaling + WebRTC media) and diagnosed a compound audio pipeline bug that was blocking production readiness.
- Designed a tool-calling Gemini agent using domain-driven architecture.
- Resolved critical audio synchronization bugs to achieve production readiness.

AI-powered group savings & cooperative management platform

Python, PostgreSQL, Redis, Next.js, Smart Contracts

- Architected a scalable backend handling authentication, contribution cycles, payouts, and real-time financial state — the same class of transactional, high-integrity system Chowdeck's order and payout flows require.
- Developed AI-powered financial insights using RAG pipelines and Gemini.
- Won the Accrue x NexaScaleHQ Hackathon for system design and innovation.

LEADER EXPERIENCE

WispTalk Africa

Tech Lead

- Collaborated with stakeholders and ISPs on partner onboarding.
- Defined the platform's data-sharing framework.
- Led infrastructure migration from on-premises to AWS.

Coopwise

Entrepreneur

- Architected a scalable backend handling authentication, contribution cycles, payouts, and real-time financial state — the same class of transactional, high-integrity system Chowdeck's order and payout flows require.

EDUCATION

National Open University of Nigeria — B.Sc. Computer Science

Thesis on decentralized finance models applied to traditional African communal savings structures (Ajo/Esusu).

ADDITIONAL

- Certifications: Backend Engineering Professional Program, ALX Africa (2025) · AI & Machine Learning, Tech Crush (2026)
- Winner, Accrue x NexaScaleHQ Hackathon (CoopWise) · Participant, Gemini Live Agent Challenge (2026)
