

ABELEJE OLANIYI GEORGE

Fullstack Software Engineer

olaniyigeorge77@gmail.com | [Github](#) | [LinkedIn](#) | [Portfolio](#)

SUMMARY

Fullstack engineer with backend depth, specializing in scalable APIs, real-time systems, and end-to-end product development using Python, Node.js, React, and Next.js. I build production-ready systems that enable people to make better decisions and perform effectively in real-world scenarios - with experience across AI-driven products, cooperative platforms, and data-integrated web systems.

Driven by a commitment to continuous learning, self-awareness, and building with purpose, creating technology that not only performs at scale but delivers meaningful, lasting impact.

TECHNICAL SKILLS

Languages: Python, Typescript, Javascript

Backend: FastAPI, Django(DRF), Webhooks, Node.js, RESTful API Design

Frontend: React, Next Js, Tailwind CSS

Databases: PostgreSQL, MongoDB, SQLite3

Cloud & DevOps: AWS (EC2, S3, RDS, SES), Docker, CI/CD pipelines, containerized deployments, Render, Vercel

Other: System design, unit & load testing, performance optimization, API documentation, GIT-based workflows.

PROFESSIONAL EXPERIENCE

Fullstack Developer - [Winnov8](#) - 2025 - Present

- Owned end-to-end development of production features across frontend and backend, delivering scalable user-facing functionalities.
- Designed and implemented an intelligent recommendation system, collaborating with stakeholders to translate product requirements into reliable, testable services.
- Optimized a real-time notification and messaging system, increasing system performance by ~58% under live usage.
- Actively participated in architecture discussions, code reviews, and performance tuning for growing production workloads.

Fullstack Developer – [Revela Africa](#) – 2025

- Built and refined core event-management features: event creation, ticketing flows, dynamic RSVP, secure payments, and user authentication – delivering a seamless end-to-end experience.
- Integrated Google APIs and payment gateways with webhooks enabling automated onboarding, calendar syncing, and smooth multi-device checkout.
- Optimized service orchestration with Redis caching to stabilize performance during peak traffic, significantly reducing response times.

Backend Engineer – [The ECO Platform](#) – 2024

- Audited and cleaned the codebase, removing dead code and rewriting inefficient query paths to improve overall API quality.
- Reduced API latency by over 91% and improved system throughput to support thousands of concurrent users demonstrating strong debugging and systematic performance analysis.

Fullstack Software Engineer – [WispTalkAfrica](#) – 2023 – 2024

- Led cloud migration to AWS, utilizing services like S3, RDS, EC2, and CloudFront, significantly improving uptime and system resilience.
- Strengthened system reliability through better infrastructure setup, monitoring practices, and incremental performance improvements.

Freelance Software Developer – Independent– 2020 – 2022

- Built data scraping, automation, and web systems for clients. Entry point into backend engineering and API development.
- Delivered automation tools and scrapers for clients across industries, independently managing project scoping, development, and delivery."

PROJECTS

[CoopWise](#) – AI-powered group savings & cooperative management platform

Stack: FastAPI, PostgreSQL, Redis, Next.js, Zustand, Gemini 1.5 Flash, Smart Contracts (Flow)

- Built a decentralized cooperative savings platform digitizing Ajo/Esusu/Chamas, using programmable stablecoin escrows and on-chain governance for trustless group finance.
- Architected scalable FastAPI backend handling authentication, contribution cycles, payouts, and real-time financial state management.
- Integrated AI agents and RAG pipelines to deliver personalized financial insights and user-facing intelligence.
- Implemented blockchain automation and fiat on/off-ramps via Flow, earning hackathon recognition for system design, scalability, and real-world impact.

[Truefit.ai](#) - Real-time AI voice interview platform for scalable, bias-free candidate screening

Stack: Python, FastAPI, WebRTC (*aiortc*), Gemini Live API, PostgreSQL, Redis, Next.js, TypeScript

- Architected a dual-channel real-time system: WebSocket for session signaling and WebRTC (SRTP/UDP) for all media, deliberately choosing WebRTC over naive WebSocket audio streaming to eliminate head-of-line blocking, enable native echo cancellation, and ensure jitter-resilient audio delivery.
- Diagnosed and fixed a compound audio pipeline bug; a greedy queue drain collapsing 40 audio chunks into one `recv()` call, combined with a `pts` clock reset corrupting frame pacing - resolving an infinite greeting loop that made the system unshippable.
- Structured Gemini as a tool-calling interview state machine with registered tools, using domain-driven architecture with abstract ports so the agent has zero dependency on current infrastructure.

EDUCATION

Bachelor Of Science(B.Sc) - Computer Science

National Open University of Nigeria, Lagos State

Professional Development - Backend Development (Mar 2025 - Oct 2025)

[ALX Africa](#)
